PRODUCT MANAGEMENT · FINAL PROJECT

PULL UP.

The group chat is dead. The plan doesn't have to be.

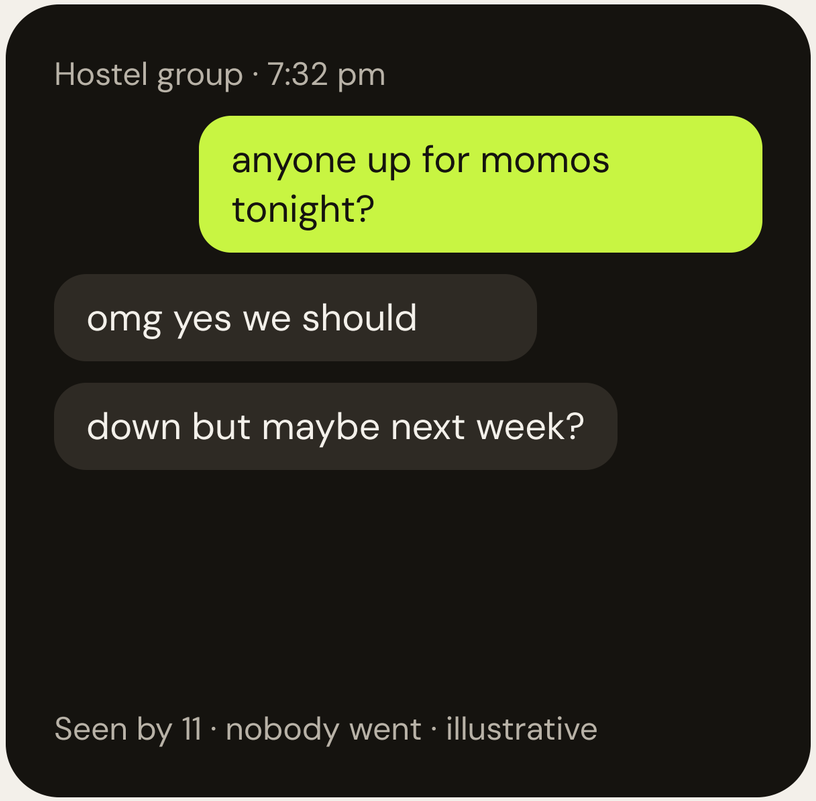

A campus-first app that helps people find others who want to do the same thing, at the same time, nearby. It turns "anyone down?" into a plan that actually happens.

Problem: Loneliness in an Increasingly Digital World · Team: [add names] · Prototype: [add link / QR]

01 · THE PROBLEM

Everyone says “we should”. Nobody commits, and the evening is gone

Dead group chat

Ideas get posted, nobody locks a time, the moment passes.

Awkward ask

Inviting an acquaintance feels risky when you can’t tell if they’re keen.

Timing mismatch

You’re free when your friends aren’t. Event apps plan days ahead.

Scroll ≠ company

Feeds fill the time, but nobody is sitting across the table.

The loneliest age group is not the elderly. It is our users

27%

of 19 to 29 year olds feel very or fairly lonely, the highest of any age group (vs 17% at 65+)

Meta-Gallup, 142 countries, 2023

1 in 6

people worldwide are affected by loneliness; 17 to 21% of 13 to 29 year olds report it

WHO Commission on Social Connection, 2025

871k

deaths a year are linked to loneliness, about 100 every hour

WHO Commission on Social Connection, 2025

So what?

Loneliness is measurable and peaks at our age. We are not claiming an app cures it. We are testing whether removing the friction of one plan gets people out more often.

The gap is between “I’m free” and “I’m there”

CORE HYPOTHESIS (TO TEST)

People don’t want to search for friends. They want someone to do something with, and let friendship follow.

HOW MIGHT WE

make one plan easy to post, safe to join and likely to actually happen, within the same evening?

We start with one campus, because density beats reach

Segment	Dense	Pain	Verify	Reach	Safe	Total
Campus students, 18 to 24, one campus	5	4	5	5	4	**23**
Sports players short of a team	3	3	2	3	4	15
Young professionals new to the city	2	4	2	2	3	13
Event-goers with no plus-one	2	2	2	3	3	12

Scored 1 to 5 by the team (assumption, to revisit after interviews). Dense: users within walking distance. Verify: can we confirm members? Reach: cost to recruit. Safe: can we moderate it?

PERSONA · ILLUSTRATIVE

Meher, 20, second year

Knows lots of people a little. Her close friends have different timetables. Skips the new café because going alone feels odd.

JOB TO BE DONE

When I'm free tonight and my friends aren't, I want to find people on campus already doing something I like, so I can go out without asking awkwardly.

We ask about last Tuesday, not about our app

INTERVIEW GUIDE · 10 TO 15 STUDENTS

1. Tell me about the last time you wanted to go out but couldn’t find anyone.
2. What did you end up doing instead?
3. Have you skipped something because you didn’t want to go alone?
4. What would make you comfortable joining people you don’t know?
5. What have you already tried: groups, apps, clubs?

We never ask “would you use PULL UP.?” People say yes to hypothetical products.

WHAT WE FOUND

Interviews done: **[__ of 15]**

Skipped a plan to avoid going alone: **[__ of __]**

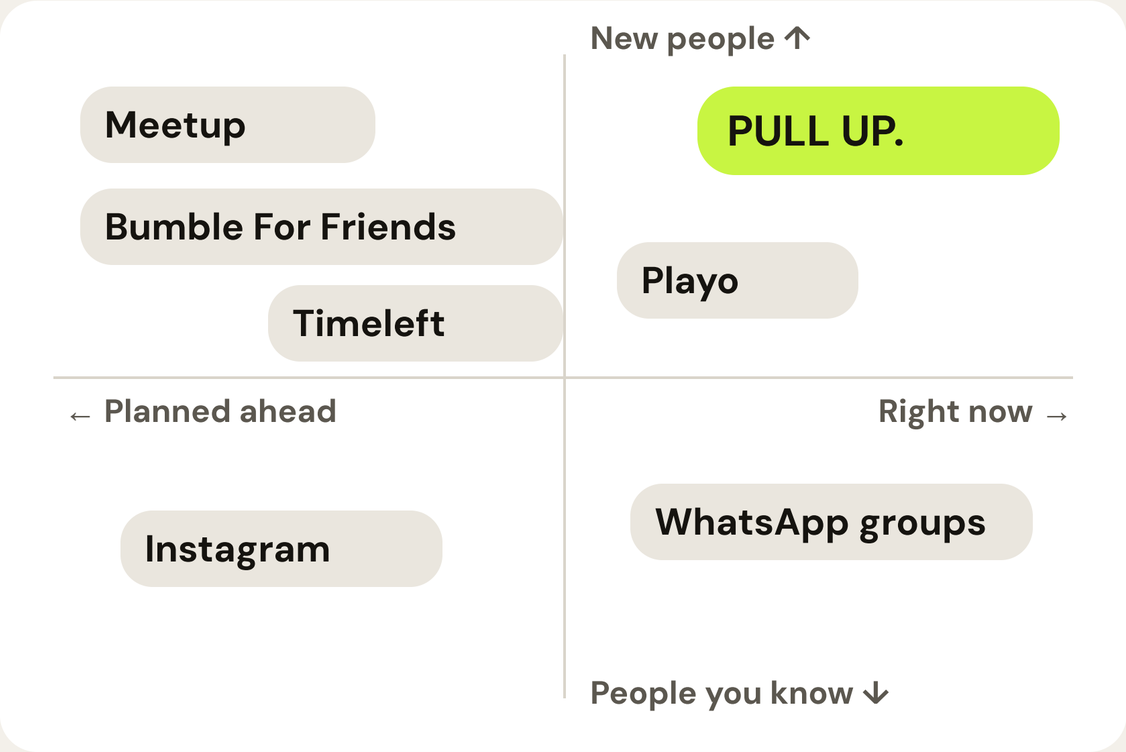

Top safety condition: **[__]**

Best quote: **[“__”]**

WHAT WOULD CHANGE OUR MIND

If most students already get plans to happen easily, or refuse to join anyone outside their friend group, we pivot to friends-only plans.

Others plan ahead or stay inside your circle. Tonight is open

Playo · finds players

Closest rival, but sports only and city-wide. We cover any activity on one verified campus.

Timeleft · dinners with strangers

Booked days ahead, one format. We are same-day and user-led.

Bumble For Friends · profiles

Swipe, chat, then maybe meet. We start from the plan.

WhatsApp and Instagram

Great for people you know. Nothing pulls in a fifth player.

07 · POSITIONING

For students who want to go out but can’t find free company, PULL UP. is a same-day plan board that turns free time into real meetups, unlike group chats or friend apps, because every post is a plan with a time, a place and open spots.

Activity first

You join momos, not a stranger’s profile. Friendship is the by-product.

Now, not someday

Plans expire when their time passes. No feed to scroll, nothing to stockpile.

No weird energy

Verified campus email, host approval, leave any time, report and block.

From bored to booked in four steps and under a minute

1

Drop a vibe

Activity, time, rough place, people needed. A few taps, no essay.

“Need 3 for UNO”

2

The Now Board

Plans happening soon on your campus, filtered by time and activity.

“2 spots · tonight”

3

Squad Lock

Request, host approves, group locks. Only then is the exact spot shared.

“4 of 4 confirmed”

4

Check-in

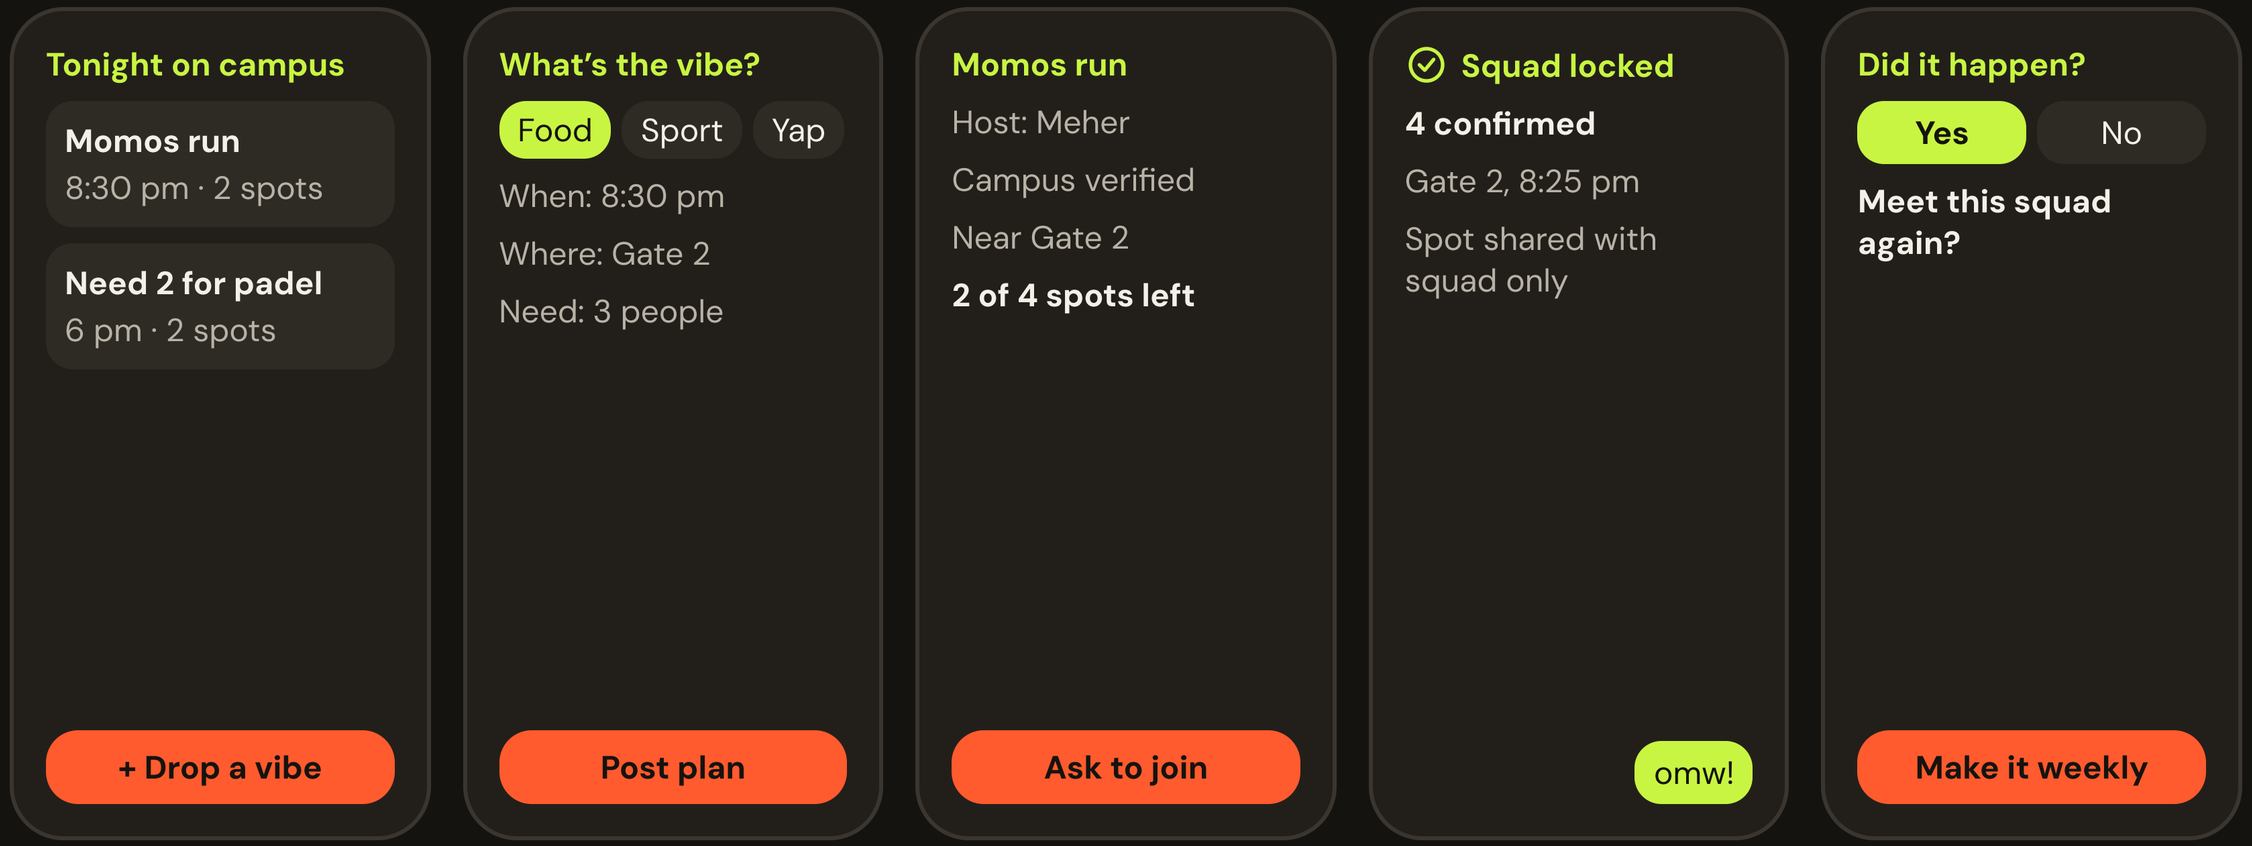

Did it happen? Meet again? That answer is our core metric.

“Same time Tuesday?”

Later, not now: **The Regulars** (recurring squads) and **Vibe Match** (recommendations). Simple rules are enough to start.

09 · PROTOTYPE WALKTHROUGH

Five screens, one journey: post, join, lock, go, check in

1 · Now Board | 2 · Drop a vibe | 3 · Plan details | 4 · Squad | 5 · Check-in

We build the loop that makes a plan happen, and cut the rest

Feature (RICE)	R	I	C	E	Score	Call
Now Board and Vibe Drop	300	3	80%	2	**360**	**Must**
Squad Lock: request, approve	200	3	70%	1.5	**280**	**Must**
Reminders	150	1	80%	0.5	240	Should
Reconnect, The Regulars	80	2	50%	2	40	Later
Vibe Match (AI)	300	1	30%	5	18	Won't

Illustrative estimates. Reach = pilot users a month; effort = person-weeks. Safety (verified email, report, block) is a release gate, not scored.

NOT IN VERSION ONE

- Infinite-scroll feed
- Swiping and personality matching
- Live location tracking
- Payments and ticketing
- A city-wide launch

Each adds build time without proving the core problem is solved.

11 · THE EXPERIMENT

The MVP is a test of one risky assumption, not a small app

RISKIEST ASSUMPTION

Enough students will join a same-day plan posted by someone they barely know, and actually turn up.

Step 1 · Concierge. WhatsApp community plus a form; we match plans by hand.

Step 2 · Closed pilot. 20 to 30 students on the app, one week.

Step 3 · Campus beta. Open to the campus only when gates pass.

60%	70%	30%	0
of plans fill their spots	of locked plans happen	join another within 7 days	unresolved safety reports

Proposed go / no-go gates for our pilot, not industry benchmarks. We revise them once we see real behaviour and sample size.

12 · GO-TO-MARKET

We beat cold start by shrinking the map, not buying users

1 campus, verified by college email

3 activities: food runs, sport, café and yap

2 time windows: lunch and 6 to 10 pm

Days 1 to 2 · Seed
10 to 15 seeders post real plans they will attend

Days 3 to 5 · Pilot
Invite 20 to 30; moderate by hand; watch drop-offs

Days 6 to 7 · Learn
Interview joiners and no-shows; fix the join flow

Weeks 2 to 5 · Beta
Open campus-wide with clubs and teams as hosts

“Stop saying we should. Just PULL UP.”

Club partners seed real plans. We never fake users, plans or popularity.

We count plans that happened, not minutes spent in the app

NORTH STAR

Plans that happened, per week

A locked plan of 2+ people that at least two members confirm took place

=

Plans posted

Supply: is the board full at 7 pm?

×

Fill rate

Demand: do spots get taken?

×

Show-up rate

Trust: do people come?

RETENTION AND CONNECTION

% who join or post again within 7 days · % who say “I’d meet this squad again”

GUARDRAILS

Safety reports per 100 meetups · host no-shows · do women return at the same rate?

ANTI-METRIC

Time spent in the app. If it rises, we have built another feed.

Finding company stays free. Venues pay when we bring the crowd

First — **Venue partnerships.** Cafés and courts pay for clearly labelled offers, once repeat use is shown.

Then — **Booking commission.** A fee when a squad books a paid court or table through a partner.

Later — **Promoted plans and club tools.** Only once the board is busy enough that visibility matters.

We never charge people to find company.

ILLUSTRATIVE UNIT ECONOMICS

4 people × ₹250 at a partner café	**₹1,000**
× 10% commission	**₹100 a plan**
× 200 partner plans a month	**₹20,000**

Per campus, before costs. Every input is an assumption, not validated willingness to pay. The real question first: can we make plans happen reliably?

Each risk has a product answer and an early warning sign

Risk	Product response	Early warning
People feel unsafe	Verified email, host approval, report and block, public venues	Any report; women not returning
Nobody posts plans	Clubs and seeders post real plans at set times	Under 5 plans on the board at 7 pm
Plans don’t fill	Three common activities, two time windows	Fill rate under 60%
People don’t show	Reminders, one-tap leave, waitlist for the spot	Show-up under 70%
One and done	“Meet again” prompt; recurring squads later	Under 30% back in 7 days
Empty off-peak	Hide quiet hours; show what’s on next	Board visits with no plan shown

Design rule: never show live location. The board shows a rough area; the exact spot goes only to the locked squad.

16 · RECOMMENDATION

Run the campus pilot now. Build more only when the gates pass

NOW · WEEKS 1 TO 5

Interviews, concierge pilot, MVP on one campus

Move on when: fill 60%, happen 70%, return 30%

NEXT · MONTHS 2 TO 3

The Regulars, reminders, first venue partners

Move on when: repeat squads form, venues renew

LATER · MONTHS 4 TO 12

Nearby campuses, then young professionals in Gurugram

Only if campus one stays busy without us seeding

Stop saying we should. Just PULL UP.

Thank you · Q&A
